List of Listings

1.1. A simple Java listing.	4
-------------------------------------	---

1. Introduction

This is a simple introduction to the template. It shows several functions supported by the template like a glossary, acronyms, citing, referencing, tables and figures (see [section 1.3](#)), lists, listings, etc.

1.1. Example of the Glossary

This work is published under the [Creative Commons Attribution-ShareAlike 3.0 Unported](#) license. So, feel free to use it for your thesis and adapt it to your needs. Because of the [Creative Commons \(CC\)](#) license you are allowed to do so. But first of all you should learn L^AT_EX. Some people think it's difficult to learn, because there is no [What You See Is What You Get \(WYSIWYG\)](#) editor.

1.2. Citing

This template uses the Harvard citing style ‘author-year’. But it's easy to change, e.g. if you don't like in line citing with parentheses just start using footnotes. Here is an example; a wise quote by *Asimov et al.* ([1997](#)):

‘Knowledge is indivisible. When people grow wise in one direction, they are sure to make it easier for themselves to grow wise in other directions as well. On the other hand, when they split up knowledge, concentrate on their own field, and scorn and ignore other fields, they grow less wise — even in their own field.’

As you have guessed, this template doesn't use the default L^AT_EX fonts. In order to do so, the package *fontspec* is included. With *fontspec* the user is able to load OpenType fonts in a L^AT_EX document (cf. [Robertson et al. 2013](#), p. 3).

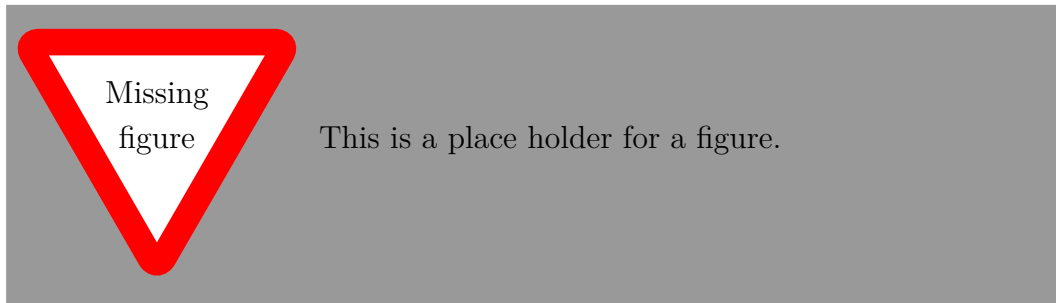

Figure 1.1.: A nice and easy to use place holder.

1.3. Tables and Figures

This section has examples of tables (see [Table 1.1](#)) and figures (see [Figure 1.1](#)).

Table 1.1.: A sample table with performance data.

1.4. Lists

Lists look like this:

- First itemtext
- Second itemtext
- Last itemtext
- First itemtext
- Second itemtext

1.5. Listings

This is how a listing in Java looks like:

```
1 package de.moritzrupp.example
2
3 public class Main {
4
5     public static void main(String[] args) {
6
7         System.out.print("Arguments: ");
8         for(String arg : args) {
9             System.out.print(arg + " ");
10        }
11        System.out.print("\n");
12    }
13 }
```

Listing 1.1: A simple Java listing.
